

GARNET.

Small quantities of *garnet* are used in Canada for making "sand belts" used in finishing wooden articles, particularly wheels, shafts, and handles for agricultural implements.

For this purpose the garnet must be crushed, to give sharp cutting edges, and very carefully graded as to size.

It is worth about \$40 per ton delivered in Ontario. There is none produced in Canada.

Amount of garnet used in the manufacturing industries, as reported by the consumers:—

Location	No. of firms reporting consumption	Domestic	Imported
		Tons	Tons
