* Averaged less than one car during the three year period.

The table shows the average annual shipments of fresh fruits and vegetables during the years 1924, 1925 and 1926. This information is the basis of the table and map on page 4. In addition to the shipments by groups the make-up of each group is indicated. There are also shown the shipments of each individual commodity, the total shipments of fresh fruits and vegetables segregated, and the aggregate shipments of fresh fruits and vegetables combined.

Attention is directed to those states which made shipments at some time during the three years, but whose shipments average less than one car annually. These are indicated thus (*) in the several columns. When statements made in the main text cannot be directly confirmed from the text tables, this table will supply the information.

The number of states which made shipments of fresh fruits and vegetables in carload lots during the three years are as follows for each commodity:

Apples	43	Eggplant	9	Peaches	34
