

BUREAU OF BOTTLED AIR

The Bureau of Bottled Air was organized in 1912 by the National Air Bottling Association, which is a voluntary organization of the air bottling industry. Its purpose is to protect the public interest in the sale of bottled air by establishing and enforcing standards of purity and quality. The Bureau is composed of representatives of the industry and the public, and its members are elected by the National Air Bottling Association.

The Bureau's primary concern is the safety and health of the consumer. To this end, it has established a system of inspection and testing of bottled air. All bottled air sold in the United States must be tested and certified by the Bureau. The Bureau's inspectors are trained to detect any impurities or defects in the air, and they issue certificates of approval only to those bottles that meet the required standards. In addition, the Bureau has established a system of labeling for bottled air. All bottles must be labeled with the name of the manufacturer, the date of bottling, and the name of the distributor. This information is essential for the consumer to make an informed choice and to identify the source of any problems.

The Bureau's activities are supported by the National Air Bottling Association, which provides the necessary funds for its operations. The Association is a non-profit organization, and its primary purpose is to promote the interests of the air bottling industry. The Bureau's work is essential to the industry, as it ensures that the public is protected from the sale of impure or unsafe bottled air. The Bureau's standards are the highest in the world, and its inspectors are among the most experienced in the field. The Bureau's work is a testament to the industry's commitment to quality and safety.
